

We can provide the cameras, the server and the software for a turn key digital video surveillance solution. Nationwide installation is available, contact us for details!

What is Remote Video Surveillance?

The **RVS** (*Remote Video Surveillance*) System is a complete digital video surveillance solution which allows you to record and view **LIVE** video from any location in the world.

This high quality digital video camera system is designed exclusively by NTI and we have a solution for any environment or mounting condition. The RVS System includes easy to manage digital video **recording software** making this a professional turn key solution.

The digital video software records the video from the IP based video cameras and stores it on the RVS computer hard drive. **Live** or recorded video is accessible from anywhere in the world via the **RVS Web Portal** over the internet.

The **RVS** System is made up of 3 Primary Elements

- 1 RVS Server**
(the computer system where all cameras and software are managed and stored)
- 2 Digital Video Cameras**
(high quality, color digital video cameras, remotely accessible, indoor and outdoor)
- 3 Digital Video Software**
(captures and records all video to the RVS Server. Easy to use and manage)

The combination of 3 high quality components make up the powerful **RVS** digital video camera system creating an incredibly versatile and reliable video surveillance environment.

The RVS system allows secure access to live and recoded video from a local or remote location via the internet.
